In today's digital recruitment ecosystem, organizations receive a massive number of job applications for a single role. This rapid increase in applicants makes manual resume screening a challenging and inefficient process. Recruiters often spend hours reviewing resumes, which can lead to delays in hiring and the risk of overlooking qualified candidates.

Traditional screening methods lack consistency and are prone to human error, making it difficult to ensure fair and accurate evaluation. Additionally, identifying relevant skills and matching them with job requirements manually is time-consuming.

To address these challenges, **Dossiera** is developed as an AI-powered talent intelligence platform. It automates resume analysis by extracting key information such as skills, education, and experience, and compares it with job descriptions.

By using AI-driven insights and match scoring, the system helps recruiters make faster, smarter, and more accurate hiring decisions.

Problem + Objective

Problem Statement:

- Recruiters receive **thousands of resumes**
- Manual screening is:
- Time-consuming
- Error-prone
- Inconsistent

Objective:

- Automate resume analysis
- Generate **AI-based match score (0–100%)**
- Help recruiters shortlist candidates faster

Solution (Dossiera Overview)

What is Dossiera?

AI-powered ATS optimization platform

Analyzes resumes using **Generative AI**

Key Features:

Resume Parsing & Skill Extraction

AI Match Scoring

Resume Summary using AI

Automated Email System

Recruiter Dashboard

Technology Stack

Frontend:

- Next.js 14
- Tailwind CSS

Backend:

- Node.js
- Next.js API

Database:

- MongoDB Atlas

AI Integration:

- Google Gemini API

Other Tools:

- NextAuth (Authentication)
- Nodemailer (Emails)

Results:

- Reduced manual screening time
- Faster candidate shortlisting
- Improved hiring accuracy
- Automated recruiter workflow

Conclusion:

- Dossieria improves recruitment efficiency
- Uses AI for smart decision-making

Future Scope:

- NLP-based advanced matching
- Integration with job portals
- Candidate ranking system
